PROPANE SAFETY INFORMATION

Thank you for choosing Mr. Heater quality hoses and fittings. The following information will help you through various connections for your high and low pressure appliances, using both disposable and refillable propane cylinders. Note: all Mr. Heater hoses and fittings are compatible with Century Primus, Coleman Co., Inc. and other common camping appliances.

How to Use This Information Guide

The sole purpose of this booklet is to assist you in making "the right connection" for those many outdoor camping and sporting applications.

The adapter fittings and hoses illustrated are the most common and should serve as a basic guide for their safe use. Consult your specific appliance, hose and fitting instructions for information concerning your individual gas burning appliances and propane hoses and fittings.

Proper Care of Fittings and Hoses

Fittings: Keep free of dirt.

Hoses: Keep foreign materials (dirt, leaves, etc.) out of hose opening. Keep away from open flames to avoid melting.

Propane and Its Safe Use

Propane gas is a heavy colorless gas with a distinct odor, and it is highly flammable. However, it is safe IF USED PROPERLY. Following the instructions in this booklet will assist you in the use of your propane fueled products.

GLOSSARY	
CSA (AGA)	Canadian Standards Association (Formerly: American Gas Association)
Backfire	Also called Flashback. The flash back of the flame through the venturi, causing burning at the orifice.
Burner	Device forming an integral unit for the introduction of propane with air or oxygen into the combustion zone for ignition.
Cylinder	With respect to propane storage, refers to a container designed and fabricated in accordance with the specifications of the U.S. Department of Transportation for the storage of propane.
L.H. Thread	A threaded connection where the male thread is turned in a counter-clockwise direction into a female thread (L.H.).
N.P.T.	American Standard Pipe Threads.
Orifice	The opening in a cap or other device whereby the flow of propane gas is limited and through which the gas is discharged to the burner.
P.O.L.	A commonly employed thread (L.H.) connection used for propane cylinders and meeting the specifications of the American Standards Institute.
Propane	A hydrocarbon product (HD ₂); A special grade of liquefied petroleum gas composed of a minimum 90% liquid volume of propane (C ₃ H ₈) and a maximum of 5% liquid volume of Propylene (C ₃ H ₆) - Ref. ANSI Z21.57, ANSI Z83.6, Z83.7.
QCC-1 Fitting (Acme Nut)	The QCC-1 connector is a nut-and-nipple assembly, and is easily identifiable by the large, external right-hand threads on the cylinder valve. The QCC-1 connector's patented nut is easy to connect and tighten without tools.
R.H. Thread	A threaded connection where the male thread is turned in a clockwise direction into a female thread (R.H.).
Rate	BTU input burned by an appliance during one hour of full operation.
Regulator	A device for controlling or maintaining a uniform gas pressure.
Safety Shutoff Valve	A device that will shut off gas supply to the controlled burner in the event of flame failure.
Soft Nose	With fittings, refers to a P.O.L. with a rubber "O" Ring which acts as a secondary seal for connection to a propane cylinder valve.
Tank Union	A P.O.L. assembly with a R.H. female device - i.e. the valve on an appliance.
Thermocouple	The pair of dissimilar metallic elements so joined as to produce a current when the junctions are at different temperatures. Used for sensing the flame in a safety shutoff assembly.

WARNING: DO NOT light appliance until hose and fitting hook-up to appliance and propane tank are completed, **AND** all connections have been tightened. **ALWAYS** check connections with a soap solution before lighting! (The liquid will bubble if there is a leak). **DO NOT USE MATCHES, LIGHTERS OR ANYTHING WITH A FLAME TO CHECK FOR LEAKS!** Propane gas has a distinct odor. **KEEP ALL APPLIANCES, HOSES AND PROPANE TANKS AWAY FROM OPEN FLAMES.**

Approved propane cylinders must be located outdoors. National Fire Protection Association (NFPA 58-1986) requires that safety device discharge (pop off valve on tank) be located outdoors.

Description

Application

A. F273776

Propane Auto-Changeover

Two Stage Regulator (with cover & bracket)

2-1/4" Inverted Female Flare Inlets x
3/8" Female Pipe Outlet

Two stage auto changeover regulator provides easy change over from empty to full cylinder while providing adequate fuel to your RV. Most commonly used on RV's with dual tank hook-up.

Features:

- 325,000 BTU Capacity • 11" W.C. Setting
- Automatically changes over from empty tank to full one
- Can remove empty cylinder and take for refill without interruption
- Gas gauge monitoring
- Pressure consistency through dual regulator

**Brass inverted fitting are not removable*

A. F273863 (With P.O.L.)

Horizontal Propane Two-Stage Regulator

Excess Flow Soft Nose P.O.L.
(Inlet) x 3/8" Female Pipe
Thread (Outlet)

Features:

- Two-stage regulator results in a more consistent inlet pressure between the first and second stage. This allows for a more consistent flow of gas to the appliance.
- 225,000 BTU Capacity
- 11" W.C. Setting
- Operating Temperature:
-20°C - 50°C

- Operating Temperature: -20°C - 50°C

A. F276136

Propane Low Pressure Regulator

(3/8" Female Pipe Thread x Restricted Flow Soft Nose P.O.L.)

The size, shape and flow characteristics of this regulator makes it ideal for use on portable heaters, hot plates, camp stoves, and other propane appliances that require 75,000 BTU or less.

Will operate low pressure appliances.

Features:

- Low Pressure
- 11" W.C. Setting
- 75,000 BTU Capacity

B. F273767

Propane Low Pressure Regulator

(1/4" Female Pipe Thread (Inlet) x 3/8" Female Pipe Thread (Outlet))

Most commonly used on low pressure appliances that are 140,000 BTU's or less.

Features:

- Low Pressure
- 11" W.C. Setting
- 140,000 BTU capacity
